A Twenty Months Orchard, Planted in February, 1914, Photographecd October, 1915.
The right trees

The right trees for citrus growing are a vital component of successful orcharding. The selection of the proper variety is crucial for the success of the orchard. Each type of tree has its own specific needs, including soil type, climate, and sun exposure. Researchers have developed varieties that are adapted to different regions, allowing farmers to grow citrus in areas that may not have been feasible in the past.

**The Life of a Citrus Tree**

Once the right tree is selected, the next step is to plant it. This involves preparing the soil, planting the tree, and ensuring it receives the proper care. The tree will grow and develop over time, producing fruit that can be harvested and sold. Throughout its life, the tree will require regular pruning, fertilization, and irrigation to ensure its health and productivity.

**Books**

Several books have been written on the subject of citrus growing. Some of the most popular include "Citrus Fruits and Their Culture" by H.F. Pedley, and "Orcharding in the Rio Grande Valley" by T. Eltweed. These books provide detailed information on the care and cultivation of citrus trees, including the best practices for each stage of the trees' life cycle.

**Second Bud Selection**

After the initial planting, the next step is to select the best buds to grow into new trees. This involves carefully selecting the strongest buds andpruning away the weaker ones. This process helps to ensure that the orchard will produce the highest quality fruit. The selected buds will then be propagated and grown into new trees, which will eventually be harvested and sold.

**The AIM of This Folder**

This folder contains information on the right trees for citrus growing. It includes detailed instructions on how to choose the best trees for your location, as well as information on the best practices for their care and cultivation. Whether you are a beginner or an experienced grower, this folder is a valuable resource for anyone interested in citrus orcharding.

**Outdoo Testimony**

Inside Testimony

Home at La Granja Farm a mile east of Donna Station and just south of County road along railroad track—the house with the finag. Visitors always welcome.

**CITRUS GROWING**

Six years ago I sold "Citrus Farms in the Rio Grande Delta are a success with the right trees and proper care.

Every year I tend trees and make improvements in the reflecting that the citrus growing in Southern Texas is progressing.

LOT 1. CITRUS TREES.—A. 1. 1. Each, the misses of the variety, has been selected by the late Mr. A. M. Scott, who has given them his personal attention. The soil is well drained and the trees are growing vigorously. The trees are healthy and vigorous and the fruit is of excellent quality. The trees are shipped with care and the fruit is ready for immediate use. The trees are suitable for all types of climates and are grown in Florida.

LOT 2. DUKWATER NURSERIES.—A. 1. 1. Each, the misses of the variety, has been selected by the late Mr. A. M. Scott, who has given them his personal attention. The soil is well drained and the trees are growing vigorously. The trees are healthy and vigorous and the fruit is of excellent quality. The trees are shipped with care and the fruit is ready for immediate use. The trees are suitable for all types of climates and are grown in Florida.

LOT 3. SWEETLEAF COMBINE.—A. 1. 1. Each, the misses of the variety, has been selected by the late Mr. A. M. Scott, who has given them his personal attention. The soil is well drained and the trees are growing vigorously. The trees are healthy and vigorous and the fruit is of excellent quality. The trees are shipped with care and the fruit is ready for immediate use. The trees are suitable for all types of climates and are grown in Florida.

LOT 4. CALIFORNIA TREES.—A. 1. 1. Each, the misses of the variety, has been selected by the late Mr. A. M. Scott, who has given them his personal attention. The soil is well drained and the trees are growing vigorously. The trees are healthy and vigorous and the fruit is of excellent quality. The trees are shipped with care and the fruit is ready for immediate use. The trees are suitable for all types of climates and are grown in Florida.
I have closed contracts for a large quantity of citrus trees to be budded with selected buds in September and October, 1917, especially for me, grown during 1918 and delivered in 1919.

**trees for 1919**

Citruses at Glen St. Mary, Florida, from other nurseries of the Glen St. Mary and other nurserymen, to be budded in 1917 and planted in 1918. The book on this subject is the standard on which our work is based. It is called "**Grande Detina**" and is a book which I own.

Oakhavena Nursery, Note Sticky Character.
